

## WASH WATER CONTROL ACCESSORIES & OPTIONS

**Auto-Pump Out Option** – Don't waste time dumping when you could be working. High capacity pumps installed in the recovery tanks automatically pump out wash water while you work! All pump out systems come complete with filter screens and sediment resistant float switches.

**Vacuum recovery / Waste Tanks** – Rust resistant, 3-step powder coated recovery tanks guarantee your cargo of wash water stays in the tank. With snap lock lids and optional auto pump out systems, you'll be able to concentrate on production style cleaning and increasing profitability. Tanks are D.O.T. approved.

**Vacuum Hose** – This beefy, crush resistant hose comes in 1.5" or 2" diameter and is abrasion, chemical & heat resistant. Remember, it's easier to add hose than move the truck!

**VacuBerm™** – Simply attach a vacuum hose to the **VacuBerm™** and place in the path of water runoff. Attaching an affordable **VacuBerm™** allows you to work hassle free anywhere, anytime. **WaterBerms** are also available. Corral your wash water directly to or around your **VacuBerm™** with this heavy duty, nylon reinforced PVC hose.

**Sand & Water Snakes** – When rounding up wash water is a problem, put the snakes to work. Position the 4 foot snakes in the path of water and direct flow to your VacuBerm for easy removal. These snakes are made of super durable PVC and filled with a mixture of sand and vermiculite or water for easier handling.

**Upholstery Pressure Control** – The Pressure-control adapter connects easily to the pump system enabling you to control the pressure of your upholstery tool from **125 PSI** to **500PSI**.

**Carpet Upholstery Tool** - To earn the big money you'll need to expand your systems cleaning capabilities. Add a **500 PSI** rated, **stainless steel** upholstery tool with **12ft. leader hose** and **250° valve** for quick, efficient cleaning of all your upholstery jobs.

**Upholstery Claws & Crevice Tools** - Get the deepest clean possible in those tiny crevices and spaces where your vacuum is just too big to fit. Just attach the tools to your vacuum system.
